

IH & HEALTH & SAFETY SERVICES

Bridging your environmental needs.

Confined Space

Conduct visual and atmospheric confined space evaluations and develop confined space programs. All evaluations conducted utilizing 4-gas meters and detailed physical inspections of each space. Entrant monitoring services also available.

Bloodborne Pathogens

Provide a full service bloodborne services, including program development and set-up. *arch environmental group* has in-stock sharps containers, biohazard containers and red disposal bags. We can also provide pick-up and disposal services and training services developed for your special needs.

Lock-Out/Tag-Out

arch environmental group is experienced in development of lock-out/tag-out programs and is prepared to conduct your training and provide necessary equipment.

Hazard Communication

It is well known that the OSHA Hazard Communication regulation is the cause of most OSHA citations. *arch environmental group* is prepared to assist in all facets of your program - development, MSDS review, labeling, or training.

Respiratory Protection

arch environmental group also provides respiratory program development, consultation or necessary fit testing where applicable.

Industrial Hygiene Services

Industrial hygiene is the science devoted to the protection and improvement of the health and well being of workers exposed to chemicals and physical agents in their work environments. This service actually covers many services offered by the *arch environmental group*, but specifically includes specialized monitoring such as noise and chemicals (both personal exposure monitoring and ambient air monitoring). Chemicals such as mercury and cadmium are just a couple of the numerous workplace chemical concerns.

Occupied Buildings

arch environmental group's Health & Safety Services includes a preventive program developed for controlling and monitoring construction dusts and odors while renovations take place in occupied buildings. The program includes items such as:

- Constructing air tight seals between construction areas and occupied areas.
- Utilizing air filtration devices and fans to control the movement of dusts and odors, in some cases developing negative pressure
- Conducting IAQ monitoring in occupied areas to ensure a clean and safe working environment.
- Training for workers and employees.
- Communication with occupied staff to address daily concerns.

Equipment

- Low-Volume Air Sampling Pumps
- Detector Tube Sampling Devices
- Indoor Air Quality Meters
- Air Flow Meters
- Air Flow Bolometer
- Non-Viable & Viable Mold Sampling Devices
- Airborne Particulate (dust) Monitors
- Moisture Meters
- Detection Tube Samplers
- Four-Gas/Confined Space Meters
- Large & Desk-top HEPA Air Filtration Devices
- Forward Looking Infrared Camera
- Respirator Fit Testing Equipment
- Volatile Organic Meter (VOC) Monitor
